Technical Specifications

H1 Pumps General Specification

Axial piston closed circuit variable displacement pumps of cradle swash-plate design with clockwise or counterclockwise direction of rotation.

Pipe connections

- Main pressure ports: ISO split flange boss
- Remaining ports: SAE straight thread O-ring boss

Recommended installation position

Pump installation position is discretionary, however the recommended control position is on the top or at the side with the top position preferred. If the pump is installed with the control at the bottom, flushing flow must be provided through port M14 located on the EDC, FNR and NFPE control.

Vertical input shaft installation is acceptable. If input shaft is at the top, 1 bar case pressure must be maintained during operation. The housing must always be filled with hydraulic fluid. Recommended mounting for a multiple pump stack is to arrange the highest power flow towards the input source. Consult Danfoss for nonconformance to these guidelines.

Auxiliary cavity pressure

Auxiliary cavity pressure will be inlet pressure with internal charge pump or case pressure with external charge supply. For reference see Operating Parameters. Please verify mating pump shaft seal capability.

H1P 089/100 Technical Data

| Feature | Size 089 | Size 100 |
|--|--|--|
| Displacement | 89.2 cm ³ [5.44 in ³] | 101.7 cm ³ [6.21 in ³] |
| Flow at rated speed (continuous) | 294 l/min [77.7 US gal/min] | 335 l/min [88.5 US gal/min] |
| Torque at maximum displacement (theoretical) | 1.42 N·m/bar [870 lbf·in/1000 psi] | 1.62 N·m/bar [990 lbf·in/1000 psi] |
| Mass moment of inertia of rotating components | 0.0116 kg·m ² [0.0086 slug·ft ²] | 0.0116 kg·m ² [0.0086 slug·ft ²] |
| Mass (dry-no charge pump) | 62 kg [137 lb] | 62 kg [137 lb] |
| Oil volume | 2.6 l [0.67 US gal] | 2.6 l [0.67 US gal] |

Shaft, flange and ports description

| | |
|---|--|
| Input shaft per ISO 3019-1 (outer diameter) | <ul style="list-style-type: none"> • Outer Ø32 mm – 4 (SAE C, 14 teeth) • Outer Ø35 mm – 4 (SAE C, 21 teeth) • Outer Ø38 mm – 4 (SAE C-C, 23 teeth) • Conical keyed shaft end similar to ISO 3019-1 code 38-3, taper 1:8 |
| Mounting flange per ISO 3019-1 | Flange 127-4 (SAE C) |
| Auxiliary mounting flange with metric fasteners, with shaft outer diameter | <ul style="list-style-type: none"> • Flange 82-2 (SAE A: 9 teeth and 11 teeth) • Flange 101-2 (SAE B, 13 teeth and SAE B-B, 15 teeth) • Flange 127-4 (SAE C, 14 teeth) |
| Suction port per ISO 3019-1 | ISO 11926-1 – 1 5/8 -12 (SAE O-ring boss) |
| Main configuration port | Ø25.4 mm; M12 x 1.75; 20 min. full thread depth |
| Case drain ports L2, L4 per ISO 3019-1 | ISO 11926-1 – 1 5/16 -12 |
| Other ports | SAE O-ring boss |
| Customer interface threads | Metric fasteners |

Technical Specifications

H1P 089/100 Operating Parameters

| Parameter | | Unit | Size 089/100 |
|--------------------------------------|--|-------------------------------|-----------------|
| Input speed | Min. for internal ¹⁾ and external ²⁾ charge supply | min ⁻¹ (rpm) | 500 |
| | Min. for full performance, internal charge supply | | 1200 |
| | Rated | | 3300 |
| | Maximum | | 3800 |
| System pressure | Maximum working | bar [psi] | 450 [6528] |
| | Maximum | | 480 [6960] |
| | Max./Min. low loop | | 45/10 [650/145] |
| Charge pressure | Minimum | bar [psi] | 18 [261] |
| | Maximum | | 34 [493] |
| Control pressure | Minimum (at corner power for EDC, MDC, FNR) | | 17 [247] |
| | Minimum (at corner power for NFPE, FDC, AC) | | 25 [363] |
| | Maximum | | 40 [580] |
| Charge pump inlet pressure | Rated | bar (absolute) [in Hg vacuum] | 0.7 [9.0] |
| | Minimum (cold start) | | 0.2 [24.0] |
| | Maximum | bar [psi] | 4.0 [58.0] |
| Case pressure | Rated | | 3.0 [44.0] |
| | Maximum | | 5.0 [73.0] |
| Lip seal maximum pressure (external) | | | 0.4 [5.8] |

¹⁾ Performance (displacement and pressure) may be limited due to limited control pressure.

²⁾ Full performance (displacement and pressure) possible at minimum charge and control pressure supply.

Filtration, cleanliness level and β_x -ratio (recommended minimum)

| | |
|---|---|
| Cleanliness per ISO 4406 | 22/18/13 |
| Efficiency β_x (charge pressure filtration) | $\beta_{15-20} = 75$ ($\beta_{10} \geq 10$) |
| Efficiency β_x (suction and return line filtration) | $\beta_{35-45} = 75$ ($\beta_{10} \geq 2$) |
| Recommended inlet screen mesh size | 100 – 125 μm |

Technical Specifications

Fluid Specification

Viscosity

| | |
|----------------------------------|---|
| Intermittent¹⁾ | 5 mm ² /s [42 SUS] |
| Minimum | 7 mm ² /s [49 SUS] |
| Recommended range | 12 – 80 mm ² /s [66 – 370 SUS] |
| Maximum | 1600 mm ² /s [7500 SUS] |

¹⁾ Intermittent = Short term $t < 1$ min per incident and not exceeding 2 % of duty cycle based load-life.

Temperature

| | |
|---------------------------------------|-------------------------|
| Minimum¹⁾ | -40°C [-40°F] |
| Rated | 104°C [220°F] |
| Recommended range²⁾ | 60 – 85°C [140 – 185°F] |
| Maximum Intermittent | 115°C [240°F] |

¹⁾ Cold start = Short term $t > 3$ min, $p \leq 50$ bar [725 psi], $n \leq 1000$ min⁻¹ (rpm).

²⁾ At the hottest point, normally case drain port.

H1P 089/100 Mounting Flange Loads

The Rated and Shock load moments apply for top or side orientation of control.

Mounting flange load with control on top

P001 916

Rated moment

$$M_R = 5630 \text{ N}\cdot\text{m} [49\,830 \text{ lbf}\cdot\text{in}]$$

Shock load moment

$$M_S = 12\,190 \text{ N}\cdot\text{m} [107\,900 \text{ lbf}\cdot\text{in}]$$

For more information, see *H1 Axial Piston Pumps, Basic Information*, **BC00000057**, the section “Mounting flange loads”.

Technical Specifications

Bearing Life and External Radial Shaft Loads

All external shaft loads affect bearing life. The pumps are designed with bearings that can accept some external radial loads. The external radial shaft load limits are a function of the load position and orientation, and the operating conditions of the unit.

Danfoss recommends clamp-type couplings for applications with radial shaft loads. Contact your Danfoss representative for an evaluation of unit bearing life if you have continuously applied external loads exceeding 25 % of the maximum allowable radial load (R_e) or the pump swash-plate is positioned on one side of center all or most of the time.

Maximum external shaft load based on shaft deflection

| External radial moment | Unit | Size 089/100 |
|------------------------|--------------|--------------|
| M_e | N·m [lbf·in] | 118 [1044] |

External radial shaft loads impact lifetime. For lifetime calculations please contact your Danfoss representative. In applications with external shaft loads, minimize the impact by positioning the load at 0° or 180° as shown below.

Radial load position

The maximum allowable radial shaft load (R_e) is based on the maximum external moment (M_e) and the distance (L) from the mounting flange to the load. It may be determined using the following formula:

$$R_e = \frac{M_e}{L}$$

Thrust loads should be avoided. Contact your Danfoss representative in the event thrust loads are anticipated.

Technical Specifications

Charge pump

Charge Pump Selection

In most applications a general guideline is that the charge pump displacement should be at least 10% of the total displacement of all components in the system. Unusual application conditions may require a more detailed review of charge flow requirements. System features and conditions which may invalidate the 10% guideline include (but are not limited to):

- Continuous operation at low input speeds $< 1500 \text{ min}^{-1}$ (rpm)
- High shock loading and/or long loop lines
- High flushing flow requirements
- Multiple low speed high torque motors
- High input shaft speeds

Contact your Danfoss representative for application assistance if your application includes any of these conditions.

20/24 cm³ Charge Pump – Flow and Power Curves

Charge pump flow and power requirements curves shown below at the following conditions:

Charge pressure = 20 bar [290 psi]

Viscosity = 11 mm²/s [63 SUS]

Temperature = 80°C [176°F]

Charge pump flow

Charge pump power requirements

Control Options

Electrical Displacement Control (EDC)

An EDC is a displacement (flow) control. Pump swash plate position is proportional to the input command and therefore vehicle or load speed (excluding influence of efficiency), is dependent only on the prime mover speed or motor displacement.

The Electrical Displacement Control (**EDC**) consists of a pair of proportional solenoids on each side of a three-position, four-way porting spool. The proportional solenoid applies a force input to the spool, which ports hydraulic pressure to either side of a double acting servo piston. Differential pressure across the servo piston rotates the swash plate, changing the pump's displacement from full displacement in one direction to full displacement in the opposite direction.

A serviceable 125 μ m screen is located in the supply line immediately before the control porting spool.

Under some circumstances, such as contamination, the control spool could stick and cause the pump to stay at some displacement.

Electrical Displacement Control

EDC schematic, feedback from swash plate

EDC Operation

H1 EDC's are current driven controls requiring a Pulse Width Modulated (PWM) signal. Pulse width modulation allows more precise control of current to the solenoids.

The PWM signal causes the solenoid pin to push against the porting spool, which pressurizes one end of the servo piston, while draining the other. Pressure differential across the servo piston moves the swashplate.

A swashplate feedback link, opposing control links, and a linear spring provide swashplate position force feedback to the solenoid. The control system reaches equilibrium when the position of the swashplate spring feedback force exactly balances the input command solenoid force from the operator. As hydraulic pressures in the operating loop change with load, the control assembly and servo/swashplate system work constantly to maintain the commanded position of the swashplate.

The EDC incorporates a positive neutral deadband as a result of the control spool porting, preloads from the servo piston assembly, and the linear control spring. Once the neutral threshold current is reached, the swashplate is positioned directly proportional to the control current. To minimize the effect of the control neutral deadband, we recommend the transmission controller or operator input device incorporate a jump up current to offset a portion of the neutral deadband.

The neutral position of the control spool does provide a positive preload pressure to each end of the servo piston assembly.

When the control input signal is either lost or removed, or if there is a loss of charge pressure, the spring-loaded servo piston will automatically return the pump to the neutral position.

Control Options

Control Signal Requirements, EDC 089/100

Pump displacement vs. control current

EDC control current

| Voltage | | 12 V _{DC} | 24 V _{DC} |
|--------------------------------|----|--------------------|--------------------|
| Minimum current to stroke pump | a* | 640 mA | 330 mA |
| | b | 1640 mA | 820 mA |
| Pin connections | | any order | |

* Factory test current, for vehicle movement or application actuation expect higher or lower value.

Control Response

H1P controls are available with optional control passage orifices to assist in matching the rate of swash-plate response to the application requirements (e.g. in the event of electrical failure).

The time required for the pump output flow to change from zero to full flow (acceleration) or full flow to zero (deceleration) is a net function of spool porting, orifices, and charge pressure.

A swash-plate response times table is available for each frame size. Testing should be conducted to verify the proper orifice selection for the desired response. Typical response times at the following conditions:

$\Delta p = 250 \text{ bar}$ [3626 psi]

Charge pressure = 20 bar [290 psi]

Viscosity and temperature = 30 mm²/s [141 SUS] and 50 °C [122 °F]

Speed = 1800 min⁻¹ (rpm)

Response Time, EDC 089/100

| Stroking direction | 0.8 mm [0.03 in] orifice | 1.3 mm [0.05 in] orifice | No orifice |
|----------------------|--------------------------|--------------------------|------------|
| Neutral to full flow | 3.8 s | 1.8 s | 1.0 s |
| Full flow to neutral | 2.2 s | 1.0 s | 0.6 s |

Control Options

Manual Displacement Control (MDC)

A Manual proportional Displacement Control (**MDC**) consists of a handle on top of a rotary input shaft. The shaft provides an eccentric connection to a feedback link. This link is connected on its one end with a porting spool. On its other end the link is connected the pumps swashplate.

This design provides a travel feedback without spring. When turning the shaft the spool moves thus providing hydraulic pressure to either side of a double acting servo piston of the pump.

Differential pressure across the servo piston rotates the swash plate, changing the pump's displacement. Simultaneously the swashplate movement is fed back to the control spool providing proportionality between shaft rotation on the control and swash-plate rotation. The MDC changes the pump displacement between no flow and full flow into opposite directions.

Under some circumstances, such as contamination, the control spool could stick and cause the pump to stay at some displacement.

For the MDC with CCO option the brake port (X7) provides charge pressure when the coil is energized to activate static function such as a brake release. The X7 port must not be used for any continuous oil consumption.

The MDC is sealed by means of a static O-ring between the actuation system and the control block. Its shaft is sealed by means of a special O-ring which is applied for low friction. The special O-ring is protected from dust, water and aggressive liquids or gases by means of a special lip seal.

Manual Displacement Control

Pump displacement vs. control lever rotation

Deadband on **B** side: $a = 3^\circ \pm 1^\circ$

Maximum pump stroke: $b = 30^\circ + 2/-1^\circ$

Required customer end stop: $c = 36^\circ \pm 3^\circ$

Internal end stop: $d = 40^\circ$

Control Options

MDC Operation

The MDC provides a mechanical dead-band required to overcome the tolerances in the mechanical actuation. The MDC contains an internal end stop to prevent turning the handle into any inappropriate position.

The MDC provides a permanent restoring moment appropriate for turning the MDC input shaft back to neutral position only. This is required to take the backlash out of the mechanical connections between the Bowden cable and the control.

! Caution

High case pressure may cause excessive wear and the NSS to indicate that the control is not in neutral position. In addition, if the case pressure exceeds 5 bar there is a risk of an insufficient restoring moment. The MDC is designed for a maximum case pressure of 5 bar and a rated case pressure of 3 bar.

- Customers must install some support to limit the setting range of their Bowden cable to avoid an overload of the MDC.
- Customers can apply their own handle design but they must care about a robust clamping connection between their handle and the control shaft and avoid overload of the shaft.
- Customers can connect two MDC's on a tandem unit in such a way that the actuation force will be transferred from the pilot control to the second control. The kinematic of the linkages must ensure that either control shaft is protected from torque overload.

! Caution

Using the internal spring force on the input shaft is not an appropriate way to return the customer connection linkage to neutral, or to force a Bowden cable or a joystick back to neutral position. It is not applicable for any limitation of the Bowden cable stroke, except the applied torque to the shaft will never exceed 20 N•m.

MDC Shaft Rotation

| Pump shaft rotation* | Clock Wise (CW) | | Counter Clock Wise (CCW) | |
|--------------------------|-----------------|------------|--------------------------|------------|
| MDC shaft rotation | CW | CCW | CW | CCW |
| Port A | in (low) | out (high) | out (high) | in (low) |
| Port B | out (high) | in (low) | in (low) | out (high) |
| Servo port high pressure | M5 | M4 | M5 | M4 |

* As seen from shaft side.

Control Options

MDC Torque

| Description | Value |
|--|------------------------|
| Torque required to move handle to maximum displacement | 1.4 N•m [12.39 lbf•in] |
| Torque required to hold handle at given displacement | 0.6 N•m [5.31 lbf•in] |
| Maximum allowable input torque | 20 N•m [177 lbf•in] |

Caution

Volumetric efficiencies of the system will have impacts on the start and end input commands.

Control Response

H1P controls are available with optional control passage orifices to assist in matching the rate of swash-plate response to the application requirements (e.g. in the event of electrical failure).

The time required for the pump output flow to change from zero to full flow (acceleration) or full flow to zero (deceleration) is a net function of spool porting, orifices, and charge pressure.

A swash-plate response times table is available for each frame size. Testing should be conducted to verify the proper orifice selection for the desired response. Typical response times at the following conditions:

$\Delta p = 250 \text{ bar}$ [3626 psi]

Control Options

Non Feedback Proportional Electric Control (NFPE)

The Non Feedback Proportional Electric (**NFPE**) control is an electrical automotive control in which an electrical input signal activates one of two proportional solenoids that port charge pressure to either side of the pump servo cylinder. The NFPE control has no mechanical feedback mechanism.

A serviceable 170 μ m screen is located in the supply line immediately before the control porting spool.

Under some circumstances, such as contamination, the control spool could stick and cause the pump to stay at some displacement.

Non Feedback Proportional Electric Control

NFPE schematic

Control Signal Requirements, NFPE 089/100

The pump displacement is proportional to the solenoid signal current, but it also depends upon pump input speed and system pressure. This characteristic also provides a power limiting function by reducing the pump swash-plate angle as system pressure increases.

A typical response characteristic is shown in the accompanying graph below:

Pump displacement vs. input signal

Control Options

Automotive Control (AC)

The H1 **Automotive Control (AC)** is an electric NFPE Control with an integrated micro-controller, installed on the pump. The integrated micro-controller enhanced control performance with a flexible, configurable control scheme for an entire single path propel transmission. It can be used in combination with fixed and variable displacement hydraulic-motors. With the pre-installed application software and easily changeable control parameters, it is possible to tailor the vehicle's driving behavior to the individual requirements of the customer.

The H1 Automotive Control is divided into 2 systems:

- AC-1
- AC-2

AC-2 is an extension of AC-1 that features an integrated pump swash plate angle sensor and software enabled functions such as Swash Plate Control.

Mode types

The application software provides 3 different hydrostatic propel methods, defined as mode types, which can be used individually.

- **Automotive Load dependent** (torque controlled) driving behavior. Setpoint for the drive curve is the engine rpm.
- **Non-Automotive Load independent** (speed controlled) driving mode. Setpoint for the drive curve is a Joystick or drive pedal signal, independent of the engine rpm. The best performance will be achieved with an AC-2 Swash Plate Angle Sensor.
- **Creep-Automotive Load dependent** (torque controlled) driving behavior (like Automotive). Setpoint for the drive curve is the engine rpm. The setpoint can be reduced by the creep potentiometer if a high engine rpm in combination with low vehicle speed is needed.

Basic functions

- Four selectable system modes, selectable via switch.
- Individual settings for forward and reverse driving direction (4 x 2 curves).
- Independent pump and hydraulic-motor profiling and ramping for each mode.
- Electric drive pedal connection
- Electronic inching function without separate control valve
- Electric creep mode potentiometer

Control Options

- Configurable System Mode & Direction change
- Load independent pump displacement control with integrated Swash Plate Angle Sensor (AC-2)
- Hydraulic-motor displacement control including brake pressure defeat function

Performance functions

- ECO fuel saving mode with automatic reduction of the engine speed during transport (Cruise control)
- Vehicle constant speed drive control
- Vehicle speed limitation
- Dynamic brake light, automatic park brake, reverse buzzer and status LED outputs
- Vehicle speed controlled output function.
- Temperature compensation for predictable performance
- Advanced CAN J1939 interface for the information exchange with the vehicle control system

Protection and safety functions

- Safety controlled vehicle start protection with engine speed check, battery check and FNR must be in neutral, etc..
- Operator presence detection
- Hydraulic system overheat and low-temperature protection
- Hydraulic motor over speed protection
- Park brake test mode for roller applications to fulfill SAE J1472 / EN500-4.
- SIL2 compliant

Engine control and protection

- CAN J1939 engine interface
- Engine speed control via drive pedal with safety controlled monitoring function
- Engine antistall protection
- Engine over speed protection during inching
- Engine speed dependent Retarder control
- Engine cold start protection

Installation features

- Factory calibration for hysteresis compensation.
- Starting current adjustment in the factory
- Pre-installed application software and parameter files

[For more information, see Automotive Control for H1 Single Pumps Technical Information, BC00000213.](#)

Control Options

Fan Drive Control (FDC)

The Fan Drive Control (**FDC**) is a non-feedback control in which an electrical input signal activates the proportional solenoid that ports charge pressure to either side of the pump servo cylinder. The single proportional solenoid is used to control pump displacement in the forward or reverse direction.

The control spool is spring biased to produce maximum forward pump displacement in the absence of an electrical input signal. Based on the spring bias spool default forward flow for a CW rotation pump is out of port B while default forward flow for a CCW rotation pump is out of port A.

Under some circumstances, such as contamination, the control spool could stick and cause the pump to stay at some displacement.

FDC control

FDC schematic

The pump should be configured with 0.8 mm control orifices to provide slowest response and maximize system stability. Additionally, pressure limiter (PL) valves are used to limit maximum fan trim speed in both (forward and reverse) directions.

H1 pumps with FDC will be delivered from factory with nominal pressure limiter setting of 150 bar [2175 psi]. The PL must be re-adjusted to ensure that the fan reaches the desired fan speed to satisfy the cooling needs of the system. HPRV setting must be always at least 30 bar [435 psi] higher than PL setting.

For more information necessary to properly size and configure a hydraulic fan drive system, see *Hydraulic Fan Drive Design Guidelines* **AB00000019**.

Warning

Use in other systems could result in unintended movement of the machine or it's elements. Loss of the input signal to this control will cause the pump to produce maximum flow.
The FDC is for Fan Drive systems only!

Due to the fail-safe functionality of the FDC control the pump will stroke to max. displacement in case the input signal to the pump control and the Diesel engine will be switched off at the same time. In this situation a low loop event can occur which may damage the pump. Therefore, it's strictly recommended to keep the input signal to the pump control alive while switching off the engine.

For further information please contact your Danfoss representative.

Control Options

Control Signal Requirements, FDC 089/100

The pump displacement is proportional to the solenoid signal current, but it also depends upon pump input speed and system pressure. This characteristic also provides a power limiting function by reducing the pump swash plate angle as system pressure increases. A typical response characteristic is shown in the accompanying graph below:

- a** – Forward threshold
- b** – Reverse threshold
- N** – Neutral override current

Control current requirements

| Voltage* | a | N | b | Pin config. |
|--------------------|--------|---------|---------|-------------|
| 12 V _{DC} | 780 mA | 1100 mA | 1300 mA | any order |
| 24 V _{DC} | 400 mA | 550 mA | 680 mA | |

* Factory test current, for fan movement expect higher or lower value.

Control Solenoid Data

| Description | | 12 V | 24 V |
|-------------------------|--------------------|------------------------------|---------|
| Maximum current | | 1800 mA | 920 mA |
| Nominal coil resistance | @ 20 °C [68 °F] | 3.66 Ω | 14.20 Ω |
| | @ 80 °C [176 °F] | 4.52 Ω | 17.52 Ω |
| Inductance | | 33 mH | 140 mH |
| PWM signal frequency | Range | 70 – 200 Hz | |
| | Recommended* | 100 Hz | |
| IP Rating | IEC 60 529 | IP 67 | |
| | DIN 40 050, part 9 | IP 69K with mating connector | |
| Connector color | | Black | |

* PWM signal required for optimum control performance.

Control Options

Single Pump Output Flow Direction

Pump output flow direction vs. control signal

| Shaft rotation | | ClockWise | | | CounterClockWise | | |
|------------------------|------|-----------|---------|--------------|------------------|---------|--------------|
| Control Logic | 12 V | 0-780 mA | 1100 mA | 1300-1800 mA | 0-780 mA | 1100 mA | 1300-1800 mA |
| | 24 V | 0-400 mA | 550 mA | 680-920 mA | 0-400 mA | 550 mA | 680-920 mA |
| Port A | | in | no flow | out | out | no flow | in |
| Port B | | out | no flow | in | in | no flow | out |
| Servo port pressurized | | M5 | n/a | M4 | M5 | n/a | M4 |

Warning

Loss of input signal to the control will cause the pump to produce maximum flow.

Connector

Connector DEUTSCH, 2-pin

| Description | Quantity | Order data |
|------------------------------|----------|------------------------|
| Mating connector | 1 | DEUTSCH DT06-2S |
| Wedge lock | 1 | DEUTSCH W2S |
| Socket contact (16–18 AWG) | 2 | DEUTSCH 0462-201-16141 |
| Danfoss mating connector kit | 1 | K29657 |

Control Response

H1P controls are available with optional control passage orifices to assist in matching the rate of swash-plate response to the application requirements (e.g. in the event of electrical failure).

The time required for the pump output flow to change from zero to full flow (acceleration) or full flow to zero (deceleration) is a net function of spool porting, orifices, and charge pressure.

A swash-plate response times table is available for each frame size. Testing should be conducted to verify the proper orifice selection for the desired response. Typical response times at the following conditions:

$\Delta p = 250 \text{ bar}$ [3626 psi]
 Charge pressure = 20 bar [290 psi]
 Viscosity and temperature = 30 mm²/s [141 SUS] and 50 °C [122 °F]
 Speed = 1800 min⁻¹ (rpm)

Response Time, FDC 089/100

| Stroking direction | 0.8 mm [0.03 in] orifice |
|--|--------------------------|
| Full flow to neutral | 3.9 s |
| Full forward flow to full reverse flow | 5.6 s |

Control Options

Manual Override (MOR)

All controls are available with a manual override functionality, either as a standard or as an option for temporary actuation of the control to aid in diagnostics.

Control with manual override

MOR schematic (EDC control shown)

Feedback from swash plate.

The MOR plunger has a 4 mm diameter and must be manually depressed to be engaged. Depressing the plunger mechanically moves the control spool which allows the pump to go on stroke. The MOR should be engaged anticipating a full stroke response from the pump.

An o-ring seal is used to seal the MOR plunger where initial actuation of the function will require a force of 45 N to engage the plunger. Additional actuation typically require less force to engage the MOR plunger.

Proportional control of the pump using the MOR should not be expected.

Warning

Unintended MOR operation will cause the pump to go into stroke; *example:* vehicle lifted off the ground. The vehicle or device must always be in a safe condition when using the MOR function.

Refer to control flow table for the relationship of solenoid to direction of flow.

Control Options

Swashplate Angle Sensor for EDC Controls

The angle sensor detects the swash plate position with an accuracy dependent upon the calibration effort done for the application and direction of rotation from the neutral position. At minimum the sensor can be used for forward, neutral and reverse (FNR) detection.

The sensor works on the hall-effect technology. The implemented technology is based on a measurement of the magnetic field direction in parallel to the chip surface. This field direction is converted to a voltage signal at the output.

Enhanced calibration of the non-linear behavior leads to more exact calculation of the pump swashplate angle. The 4-pin DEUTSCH connector is part of the sensor housing. The swashplate angle sensor is available for all EDC controls for 12 V and 24 V.

Swashplate angle vs. output of supply voltage

Warning

Strong magnetic fields in the proximity of the sensor can influence the sensor signal and must be avoided.

Contact your Danfoss representative in case the angle sensor will be used for safety functions.

Swash Plate Angle Sensor Parameters (EDC)

| Parameter | Minimum | Typical | Maximum |
|---|---------------------|-------------------|---------------------|
| Supply voltage range | 4.5 V _{DC} | 5 V _{DC} | 5.5 V _{DC} |
| Supply protection | – | – | 18 V _{DC} |
| Pump neutral output (% of supply voltage) | – | 50% | – |
| Working range (swash plate angle) | –18° | – | 18° |
| Required supply current | – | – | 30 mA |
| Output current signal | – | 9 mA | 11 mA |
| Working temperature | –40 °C | 80 °C | 115 °C |

| Electrical Protection | Standard | Class |
|-----------------------|--------------------|------------------------------|
| IP Rating | IEC 60 529 | IP 67 |
| | DIN 40 050, part 9 | IP 69K with mating connector |
| EMC Immunity | ISO 11452-2 | 100 V/m |

Control Options

Calibration of the sensor output within the software is mandatory. Vehicle neutral thresholds in the software ($\pm 0.5^\circ$) are vehicle dependent and must consider different conditions, example: system temperature, system pressure and/or shaft speed.

For safety function: If the sensor fails (invalid signal $< 10\%$ or $> 90\%$ of supply voltage), it must be sure that the ECU will go into a diagnostic mode and shift into limited mode in order for the driver to take the full control or the mechanical breaks should be activated. Strong magnetic fields in the proximity of the sensor can influence the sensor signal and must be avoided.

Swash Plate Angle Sensor Connector

Connector DEUTSCH, 4-pin

Pin assignment:

1. Ground (GND)
2. Not connected

Control Options

Swash Plate Angle Sensor for NFPE and AC2 Controls

The angle sensor detects the swash plate angle position and direction of rotation from the zero position. The swash angle sensor works on the AMR sensing technology. Under the saturated magnetic field, the resistance of the element varies with the magnetic field direction.

The output signal give a linear output voltage for the various magnet positions in the sensing range.

Swash Plate Angle Characteristic

The volumetric losses depend on pump max. displacement, actual displacement, speed, delta pressure, viscosity and temperature.

Swashplate angle vs. output voltage (calibrated at 50 °C)

1. Signal 1 (nominal)
2. Signal 2 (redundant)

The displacement can be calculated by:

$$V = \frac{\tan \alpha \cdot V}{\tan 18^\circ} \text{ (cm}^3\text{)}$$

The corresponding flow is:

$$Q = \frac{V \cdot n \cdot \eta_{vol}}{1000} \text{ (l/min)}$$

Control Options

Swash Plate Angle Sensor Parameters (NFPE/AC)

| Parameter | Minimum | Typical | Maximum |
|---|-------------|-------------|-------------|
| Supply voltage range | 4.75 V | 5 V | 5.25 V |
| Supply protection | – | – | 28 V |
| Supply current | – | 22 mA | 25 mA |
| Output current (Signal 1, 2) | – | 0.1 mA | – |
| Short circuit output current to supply or GND ¹⁾ | – | – | 7.5 mA |
| Sensitivity | 70.0 mV/deg | 78.0 mV/deg | 85.8 mV/deg |
| Working range (swash plate angle) | –18° | 0° | 18° |
| Correlation between signals 1 and 2 ²⁾ | 475 mV | 500 mV | 525 mV |

¹⁾ Up to duration of 2.5 seconds at 25°C

²⁾ Signal 1 (nominal) is lower than signal 2 (redundant)

Swash-plate Angle Sensor Connector (NFPE/AC2)

Connector DEUTSCH, 4-pin

Pin assignment:

1. Ground (GND)
2. Output Signal 2 (SIG2) – Secondary (redundant)
3. Output signal 1 (SIG 1)
4. Supply (V+)

Connector order numbers

| Description | Quantity | Order number |
|---|----------|-----------------|
| Mating connector DEUTSCH DTM06-4S-E004 | 1 | 11105824 |
| Wedge lock W4S | 1 | 11084558 |
| Socket contact DEUTSCH 0462-201-16141 (16–18 AWG) | 2 | K02325 |

Interface with ECU (NFPE)

Minimum recommended load resistance is 100 kΩ.

Control Options

Control Cut Off Valve (CCO)

The H1 pump offers an optional control cut off valve integrated into the control. All EDC, NFPE and MDC controls are available with a CCO valve. This valve will block charge pressure to the control, allowing the servo springs to de-stroke both pumps regardless of the pump's primary control input.

There is also a hydraulic logic port, X7, which can be used to control other machine functions, such as spring applied pressure release brakes. The pressure at X7 is controlled by the control cut off solenoid. The X7 port would remain plugged if not needed.

In the normal (de-energized) state of the solenoid charge flow is prevented from reaching the controls. At the same time the control passages and the X7 logic port are connected and drained to the pump case. The pump will remain in neutral, or return to neutral, independent of the control input signal. Return to neutral time will be dependent on oil viscosity, pump speed, swashplate angle, and system pressure.

When the solenoid is energized, charge flow and pressure is allowed to reach the pump control. The X7 logic port will also be connected to charge pressure and flow.

The solenoid control is intended to be independent of the primary pump control making the control cut off an override control feature. It is however recommended that the control logic of the CCO valve be maintained such that the primary pump control signal is also disabled whenever the CCO valve is de-energized. Other control logic conditions may also be considered.

The CCO valve is available with 12 V or 24 V solenoid.

The response time of the unit depends on the control type and the used control orifices.

CCO schematic (MDC shown)

Brake gauge port with MDC

Caution

It is not recommended to use brake port for any external flow consumption to avoid malfunction of CCO function.

Control Options

CCO Connector (MDC)

Connector DEUTSCH, 2-pin

| Description | Quantity | Order data |
|------------------------------|----------|------------------------|
| Mating connector | 1 | DEUTSCH DT06-2S |
| Wedge lock | 1 | DEUTSCH W2S |
| Socket contact (16–18 AWG) | 2 | DEUTSCH 0462-201-16141 |
| Danfoss mating connector kit | 1 | K29657 |

CCO Connector (EDC, NFPE)

Connector CCO DEUTSCH, 2-pin

Connector CCO with key C (EDC, NFPE)

| Description | Quantity | Order data |
|----------------------------|----------|------------------------|
| Mating connector | 1 | DEUTSCH DT06-2SC |
| Wedge lock | 1 | DEUTSCH W2SC |
| Socket contact (16–18 AWG) | 2 | DEUTSCH 0462-201-16141 |

CCO Solenoid Data

| Nominal supply voltage | | 12 V | 24 V |
|--------------------------------------|-----------|------------------------------------|--------|
| Supply voltage | Maximum | 14.6 V | 29 V |
| | Minimum | 9.5 V | 19 V |
| Bi-directional diode cut off voltage | | 28 V | 53 V |
| Nominal coil resistance at 20 °C | | 10.7 Ω | 41.7 Ω |
| Supply current | Maximum | 850 mA | 430 mA |
| | Minimum | 580 mA | 300 mA |
| PWM frequency | Range | 50 – 200 Hz | |
| | Preferred | 100 Hz | |
| Electrical protection class | | IP67 / IP69K with mating connector | |

CCO solenoids are design for battery voltage application within the voltage range in the table above, in consideration of a wide range of environmental temperature common for known hydraulic applications. Closed loop PWM current supply can be also applied and is helpful in case that the voltage range is exceeded, or ambient temperature could rise in an unusual manner.

Control Options

Displacement Limiter

H1 pumps are designed with optional mechanical displacement (stroke) limiters factory set to max. displacement. The maximum displacement of the pump can be set independently for forward and reverse using the two adjustment screws to mechanically limit the travel of the servo piston down to 50% displacement.

Adjustments under operating conditions may cause leakage. The adjustment screw can be completely removed from the threaded bore if backed out to far.

P003 266

H1P 089/100 Displacement Change (approximately)

| Parameter | Size 089 | Size 100 |
|---------------------------------------|---|--|
| 1 turn of displacement limiter screw | 9.3 cm ³ [0.57 in ³] | 10.7 cm ³ [0.65 in ³] |
| Internal wrench size | 5 mm | |
| External wrench size | 17 mm | |
| Torque for external hex seal lock nut | 48 N·m [424 lbf·in] | |

For more information, see *H1 Axial Piston Pumps, Service Manual*, **AX00000087**, the section “Displacement Limiter Adjustment”.

Dimensions and Data

H1P 089/100 Input Shaft Option G1 (SAE C, 14 teeth)

1. Mounting flange 127 – 4 per ISO 3019-1; surface to be paint free
2. **Spline Data:** 14 teeth, Pressure angle: 30°, Pitch: 12/24, Ø29.633 [1.167]; Fillet root side fit per ANSI B92.1-1996, Class 6H

Torque rating

| Rated torque ¹⁾ | Maximum torque ²⁾ |
|----------------------------|------------------------------|
| 1116 N•m [9880 lbf•in] | 1488 N•m [13 170 lbf•in] |

¹⁾ Rated torque includes just the capability of the press-fit in accordance with an assumed fastener grade 5.

²⁾ Mating part must maintain a minimum gap width of 1.0 mm with the shaft shoulder after installation of the part. Transmittable torque will be reduced if the minimum gap requirement is not met.

For definitions of maximum and rated torque values, refer to *H1 Axial Piston Pumps Basic Information, BC00000057*, the section “Shaft Torque Ratings and Spline Lubrication”.

Tapered shaft customer acknowledgement

The Danfoss H1 tapered shaft has been designed using the industry standard ISO 3019-1, minus the through-hole in the end of the shaft. Danfoss guarantees the design and manufactured quality of the tapered shaft.

Danfoss recommends a self-locking nut instead of a castle nut and pin. The nut and mating square-cut key are customer supplied. The specified torque rating of the tapered shaft is based on the cross-sectional diameter of the shaft, through the keyway, and assumes the proper clamp and fit between shaft and coupling. The customer is responsible for the design and manufactured quality of the mating female coupling and key and applied torque on the nut. Danfoss has made provisions for the key in accordance to the ISO specification with the understanding that the key is solely to assist in the installation of the mating coupling.

Caution

Possible hazard because torque or loading inadvertently transmitted by the customer supplied key may lead to premature shaft failure. Torque must be transmitted by the taper fit between the shaft and it's mating coupling, not the key.

Dimensions and Data

H1P 089/100 Auxiliary Mounting, Option H1 (SAE A, 11 teeth)

1. Auxiliary mounting pad for mating flange 82-2 per ISO 3019-1 (SAE A); Paint free
2. **Spline Data:** 11 teeth, Pressure angle: 30°, Pitch: 16/32, $\varnothing 17.463$ [0.6875]; Fillet root side fit per ANSI B92.1-1996, Class 6; minimum active spline length 10.5 mm
3. O-ring seal required; Ref. $\varnothing 82.22$ [3.237] ID x 2.62, cross section

5. Mating shaft and shaft shoulder must not protrude beyond this point

Maximum Torque

395 N·m [3500 lbf·in]

For definitions of maximum and rated torque values, refer to *H1 Axial Piston Pumps Basic Information*, **BC00000057**, the section "Shaft Torque Ratings and Spline Lubrication".

! Caution

Standard pad cover is installed only to retain coupling during shipping. Do not operate pump without an auxiliary pump or running cover installed.

Dimensions and Data

H1P 089/100 Auxiliary Mounting, Option H5 (SAE B-B, 15 teeth)

1. Auxiliary mounting pad for mating flange 101-2 per ISO 3019-1 (SAE B); Paint free
2. **Spline Data:** 15 teeth, Pressure angle: 30°, Pitch: 16/32, $\varnothing 23.813$ [0.938]; Fillet root side fit per ANSI B92.1-1996, Class 6; minimum active spline length 14.3 mm
3. O-ring seal required; Ref. $\varnothing 94.92$ [3.737] ID x 2.62, cross section
4. Thread: M12x1.75-6H; 20 [0.787] min. depth (4x)
5. Mating shaft and shaft shoulder must not protrude beyond this point

| | |
|----------------|-----------------------|
| Maximum Torque | 693 N·m [6130 lbf·in] |
|----------------|-----------------------|

For definitions of maximum and rated torque values, refer to *H1 Axial Piston Pumps Basic Information*, **BC00000057**, the section "Shaft Torque Ratings and Spline Lubrication".

! Caution

Standard pad cover is installed only to retain coupling during shipping. Do not operate pump without an auxiliary pump or running cover installed.

Dimensions and Data

H1P 089/100 Auxiliary Mounting, Option H6 (SAE C, 14 teeth)

1. Auxiliary mounting pad for mating flange 127-4 per ISO 3019-1 (SAE C); Paint free
2. **Spline Data:** 14 teeth, Pressure angle: 30°, Pitch: 12/24, Ø29.633 [1.667]; Fillet root side fit per ANSI B92.1-1996, Class 6; minimum active spline length 17.8 mm
3. O-ring seal required; Ref. Ø120.32 ID x 2.62, cross section
4. Thread: M12x1.75-6H; 21 [0.827] min. depth (4x)
5. Thread: M16x2-6H; 25 [0.984] min. depth (2x)
6. Mating shaft and shaft shoulder must not protrude beyond this point

| | |
|----------------|-----------------------|
| Maximum torque | 816 N•m [7220 lbf•in] |
|----------------|-----------------------|

For definitions of maximum and rated torque values, refer to *H1 Axial Piston Pumps Basic Information*, **BC00000057**, the section "Shaft Torque Ratings and Spline Lubrication".

Caution

Standard pad cover is installed only to retain coupling during shipping. Do not operate pump without an auxiliary pump or running cover installed.

Dimensions and Data

H1P 089/100 Auxiliary Mounting, Option S1 (SAE B-B, 14 teeth)

1. Auxiliary mounting pad for mating flange 101-2 per ISO 3019-1 (SAE B); Paint free
2. **Spline Data:** 14 teeth, Pressure angle: 30°, Pitch: 12/24, Ø29.633 [1.667]; Fillet root side fit per ANSI B92.1-1996, Class 6; minimum active spline length 17.8 mm
3. O-ring seal required; Ref. Ø101.32 ID x 2.62, cross section
4. Thread: M12x1.75-6H; 20 [0.787] min. depth (4x)
5. Mating shaft and shaft shoulder must not protrude beyond this point

| | |
|----------------|-----------------------|
| Maximum torque | 816 N·m [7220 lbf·in] |
|----------------|-----------------------|

For definitions of maximum and rated torque values, refer to *H1 Axial Piston Pumps Basic Information*, **BC00000057**, the section "Shaft Torque Ratings and Spline Lubrication".

⚠ Caution

Standard pad cover is installed only to retain coupling during shipping. Do not operate pump without an auxiliary pump or running cover installed.

Dimensions and Data

H1P 089/100 Displacement Limiter, Option B

1. Displacement limiter screw (2x)
2. Displacement limiter seal nut (2x)

Wrench size, torque

| Wrench size for DL screw | Wrench size for DL seal nut | Torque |
|--------------------------|-----------------------------|-------------------|
| 5 internal hex | 17 external hex | 48 N·m [35 lb·ft] |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

H1P 089/100 Single Pump Ports

Ports per ISO 11 926-1

| Port | Description | Size |
|--------|---|--|
| A, B | System ports | Ø25.4 mm; M12 x 1.75; 20 min. full thread depth Recommended screw in depth 1.5 x thread dia |
| L2, L4 | Case drain ports | 1 ⁵ / ₁₆ -12 |
| MA, MB | System A/B gauge ports | 9 ¹⁶ / ₁₆ -18 |
| E/F | Charge filtration ports | 1 ¹ / ₁₆ -12 |
| M3 | Charge pressure gauge port | 9 ¹⁶ / ₁₆ -18 |
| M4, M5 | Servo gauge port | 7 ¹⁶ / ₁₆ -20 |
| M14 | Case gauge port (EDC, FNR, NFPE) | 7 ¹⁶ / ₁₆ -20 |
| S | Charge inlet port | 1 ⁵ / ₈ -12 Recommended screw in depth 1.5 x thread dia |
| 1 | Case pressure port | 1 ¹ / ₁₆ -12 |
| 2 | Connector DEUTSCH DT04-2P, to be paint free | |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

H1P 089/100 Dimensions

P005 934

- 1.** Mounting flange 127 – 4 per ISO 3019-1; surface to be paint free
- 2.** Shaft to be paint free
- 3.** Coupling must not protrude beyond this point

Technical Information
H1P 089/100 Axial Piston Single Pumps

Dimensions and Data

Dimensions and Data

1 — Other side screw head space

[Please contact Danfoss representative for specific installation drawings.](#)

Dimensions and Data

Controls

EDC Options A2 and A3 (12/24 V)

- 1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
- 2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
- 3. Control Manual OverRide **C1**
- 4. Control Manual OverRide **C2**
- 5. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

EDC with MOR, Options A4 and A5 (12/24 V)

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual OverRide **C1**
4. Control Manual OverRide **C2**
5. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20

Depressing the plunger mechanically moves the control spool. Actuation allows full stroke pump response as per coil and rotation dependent control logic.

Connector **C1/C2**: DEUTSCH DTM04-2P

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

EDC with CCO (key C), Options E7 and E8 (12/24 V)

- 1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
- 2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
- 3. Control Manual OverRide **C1**
- 4. Control Manual OverRide **C2**
- 5. Brake gauge port **X7** per ISO 1926-1: $\frac{7}{16}$ -20
- 6. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20
- 7. Control-Cut-Off with C-key connector **C4** DEUTSCH DT04-2P, paint free

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

EDC with ASNSR, Options: H2 and H3 (12/24 V)

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual OverRide **C1**
4. Control Manual OverRide **C2**
5. Angle sensor connector **S2** DEUTSCH DT04-4P, paint free

Connector DEUTSCH, 4-pin

4-pin assignment:

1. Ground (GND)
2. Not connected
3. Output signal 1 (SIG 1)
4. Supply (V+)

Connector **C1/C2**: DEUTSCH DTM04-2P

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

EDC with MOR and ASNSR, Options H6 and H7 (12/24 V)

- 1.** Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
- 2.** Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
- 3.** Control Manual OverRide **C1**
- 4.** Control Manual OverRide **C2**
- 5.** Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ –20

Connector *DEUTSCH*, 4-pin

4-pin assignment:

- 1.** Ground (GND)
- 2.** Not connected
- 3.** Output signal 1 (SIG 1)
- 4.** Supply (V+)

Connector **C1/C2**: *DEUTSCH DTM04-2P*

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

EDC with CCO and ASNSR, Options H8 and H9 (12/24 V)

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual OverRide **C1**
4. Control Manual OverRide **C2**
5. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20
6. Brake gauge port **X7** per ISO 1926-1: $\frac{7}{16}$ -20
7. Control-Cut-Off with C-key connector **C4** DEUTSCH DT04-2P, paint free

Depressing the plunger mechanically moves the control spool. Actuation allows full stroke pump response as per coil and rotation dependent control logic.

Connector DEUTSCH, 4-pin

Angle sensor connector S2: DEUTSCH DTM04-4P

1. Ground (GND)
2. Not connected
3. Output signal 1 (SIG 1)
4. Supply (V+)

Connectors C1/C2/C4: DEUTSCH DTM04-2P

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

NFPE with MOR, Options: N1, N2 (12/24 V)

Non-Feedback Proportional Electric control with Manual Over Ride options N1 (12 V) and N2 (24 V).

- 1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
 - 2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
 - 3. Control Manual OverRide **C1**
 - 4. Control Manual OverRide **C2**
 - 5. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20
- Control solenoid connectors **C1/C2** DEUTSCH DTM04-2P pin/assignment

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

NFPE with MOR, CCO, ASNSR, Options: N3, N4 (12/24 V)

Non-Feedback Proportional Electric control with Control-Cut-Off valve with key C, Manual Over Ride and Angle Sensor, options N3 (12 V) and N4 (24 V).

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual Over Ride **C1**
4. Control Manual Over Ride **C2**
5. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20
6. Control-Cut-Off with C-key connector **C4** DEUTSCH DT04-2P, paint free

Depressing the plunger mechanically moves the control spool. Actuation allows full stroke pump response as per coil and rotation dependent control logic.

Connector DEUTSCH, 4-pin

Pin/assignment:

1. Ground (GND)
2. Output Signal 2 (SIG2) – Secondary (redundant)
3. Output signal 1 (SIG 1)
4. Supply (V+)

Control solenoid connectors **C1/C2/C4** DEUTSCH DTM04-2P pin/assignment

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

NFPE with MOR and ASNSR, Options: N5, N6 (12/24 V)

Non-Feedback Proportional Electric control with Manual Over Ride and Angle Sensor, options N5 (12 V) and N6 (24 V).

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual OverRide **C1**
4. Control Manual OverRide **C2**
5. Angle sensor connector **S2** DEUTSCH DT04-4P, paint free

Connector DEUTSCH, 4-pin

Pin/assignment:

1. Ground (GND)
2. Output Signal 2 (SIG2) – Secondary (redundant)
3. Output signal 1 (SIG 1)
4. Supply (V+)

Control solenoid connectors C1/C2 DEUTSCH 2-pin/assignment

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

NFPE with MOR and CCO, Options: N7, N8 (12/24 V)

Non Feedback Proportional Electric control with Manual Over Ride and Control-Cut-Off valve key C, options N7 (12 V) and N8 (24 V).

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free
2. Control solenoid connector **C2** DEUTSCH DT04-2P, paint free
3. Control Manual OverRide **C1**
4. Control Manual OverRide **C2**
5. Brake gauge port **X7** per ISO 1926-1: $\frac{7}{16}$ -20
6. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20
7. Control-Cut-Off with C-key connector **C4** DEUTSCH DT04-2P, paint free

Depressing the plunger mechanically moves the control spool. Actuation allows full stroke pump response as per coil and rotation dependent control logic.

Connector DEUTSCH, 4-pin

Pin/assignment:

1. Ground (GND)
2. Output Signal 2 (SIG2) – Secondary (redundant)
3. Output signal 1 (SIG 1)
4. Supply (V+)

Control solenoid connectors **C1/C2** DEUTSCH DTM04-2P pin assignment

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

FDC Options: F1, F2 (12/24V)

1. Control solenoid connector **C1** DEUTSCH DT04-2P, paint free

2. Case gauge port **M14** per ISO 1926-1: $\frac{7}{16}$ -20

Control solenoid connectors *DEUTSCH*, 2-pin assignment

| Pin | Assignment | Alternative | Pin | Assignment |
|-----|------------|-------------|-----|------------|
| 1 | Supply | OR | 1 | Ground |
| 2 | Ground | | 2 | Supply |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

Automotive Control (AC)

- 1 Plug removing can cause contamination issues
- 2 PPU wire harness is factory installed to speed sensor

Connectors description

| Port | Description |
|------------------|---|
| C1 and C2 | 1. Control Manual Override C1 2. Control Manual Override C2 |
| CC1 | Port A Control connector DEUTSCH DTM04-12P; paint free |
| CC2 | Port B Control connector DEUTSCH DTM04-12P; paint free |
| CC3 | Control connector DEUTSCH DT06-2S; paint free; For using connector, the plug may be removed. |
| CAN | Control connector DEUTSCH DTM04-3P; paint free; For using connector, the plug may be removed. |

Please contact Danfoss representative for specific installation drawings.

Dimensions and Data

AC connectors dimensions

PPU wire harness is factory installed to speed sensor.

CC3

Connector DEUTSCH, 2-pin

1. Digital output A1 (+)
2. Digital output A2 (-)

CAN

Connector DEUTSCH, 3-pin

1. CAN High
2. CAN Low
3. CAN Shield

PPC

Connector DEUTSCH, 6-pin

1. Sensor A (+)
2. Analog input A
3. Sensor A (-)
4. Sensor B (-)
5. Analog input B
6. Sensor B (+)

Connector DEUTSCH, 12-pin

CC1

1. Battery (-)
2. Battery (+)
3. Sensor (+)
4. Sensor (-)
5. Motor rpm input (frequency)
6. Forward input (digital)
7. Reverse input (digital)
8. Sensor (+)
9. Sensor (-)
10. Drive pedal input (analog – nominal)
11. Drive pedal input (analog – red)
12. Neural input (digital)

CC2

1. Inch input (analog – red)
2. Mode switch B input (digital – nominal)
3. Motor prop/PCOR driver
4. Motor direction input (analog)
5. Sensor (+)
6. Sensor (-)
7. Inch input (analog – nominal)
8. Motor BPD driver
9. Digital output B2 (-)
10. Digital output B1 (+)
11. Mode switch A input (digital)
12. Mode switch B input (digital – red)

Integral full flow charge pressure filtration with filter bypass sensor, option M, for end cap option D3

Integral charge filtration with filter bypass sensor, option M, for end cap option F4 (SAE-C PTO)

Dimensions and Data

External Full Flow Charge Pressure Filtration, Option S

External filtration, option S for end cap options D8 or F5

- E** Charge filtration ports per ISO 11926-1: 1¹/₁₆–12 from filter
- MB** System gauge port per ISO 11926-1: ⁹/₁₆–18
- S** Charge inlet port per ISO 11926-1: 1⁵/₈–12
- 1** Charge pressure construction port per ISO 11926-1: ⁵/₁₆–24

Please contact Danfoss representative for specific installation drawings.

Products we offer:

- DCV directional control valves
- Electric converters
- Electric machines
- Electric motors
- Hydrostatic motors
- Hydrostatic pumps
- Orbital motors
- PLUS+1® controllers
- PLUS+1® displays
- PLUS+1® joysticks and pedals
- PLUS+1® operator interfaces
- PLUS+1® sensors
- PLUS+1® software
- PLUS+1® software services, support and training
- Position controls and sensors
- PVG proportional valves
- Steering components and systems
- Telematics

Danfoss Power Solutions is a global manufacturer and supplier of high-quality hydraulic and electric components. We specialize in providing state-of-the-art technology and solutions that excel in the harsh operating conditions of the mobile off-highway market as well as the marine sector. Building on our extensive applications expertise, we work closely with you to ensure exceptional performance for a broad range of applications. We help you and other customers around the world speed up system development, reduce costs and bring vehicles and vessels to market faster.

Danfoss Power Solutions – your strongest partner in mobile hydraulics and mobile electrification.

Go to www.danfoss.com for further product information.

We offer you expert worldwide support for ensuring the best possible solutions for outstanding performance. And with an extensive network of Global Service Partners, we also provide you with comprehensive global service for all of our components.
